

AdaxaAppliance

World's First Open Source ERP&CRM Appliance

Adaxa Suite – a complete integrated Open Source ERP&CRM solution provided as an appliance. Fully featured business software is now available to small and medium sized businesses without license fees or subscriptions and without the need to install and configure complex software products.

The AdaxaAppliance is the world's first turn key Business Management Solution built on best-of-breed Open Source technologies incorporated into an easy to use appliance. Add the AdaxaAppliance to your network, run through the step-by-step configuration and you are up and running with a comprehensive system to manage your business. The AdaxaAppliance provides the functionality of traditional large ERP&CRM systems at a fraction of the cost allowing your business to move past the constraints imposed by small accounting systems and dozens of spreadsheets.

The appliance approach simplifies the initial delivery of the ERP system capability so that you can focus your investment on the configuration, implementation and training that enables your business to derive the maximum value from its ERP system.

COMPLETE BUSINESS MANAGEMENT

The AdaxaAppliance comes loaded with Adaxa Suite - an integrated Business Management solution. Financials, Warehousing, Manufacturing, CRM, POS, Shipping, Business Intelligence, Intranet and more all ready to be tailored to your needs.

NO LICENCE FEES—EVER

Ownership of the AdaxaAppliance system is simple - you buy it and own it. There are no limitations to the number of users, companies, customers, branches, warehouses etc.

EASY SETUP & MIGRATION

Add the AdaxaAppliance to your network, run through the step by step configuration and you are up and running with a comprehensive system to manage your business. Import your current data from spreadsheets, MYOB, whatever your current platform.

SUPPORT

Support for AdaxaAppliance is simple & transparent. Prepaid & ad hoc support can be purchased to support your system. Training, configuration and development services are also available.

Components of the Adaxa Appliance

...for people with a technical interest

ERP&CRM System:

Wikipedia says "Enterprise resource planning (ERP) systems integrate internal and external management information across an entire organization, embracing finance/accounting, manufacturing, sales and service, customer relationship management, etc. ERP systems automate this activity with an integrated software application. Their purpose is to facilitate the flow of information between all business functions inside the boundaries of the organization and manage the connections to outside stakeholders". Accounting systems such as MYOB and Quickbooks address a limited subset of these needs, which is why so much company information is in spreadsheets.

The Adempiere ERP&CRM used in the Adaxa Appliance is a system that is similar in purpose to Microsoft Axapta, SAP Business One, Pronto etc. It also includes CRM functionality, which directly utilizes the same ERP data to avoid duplication and errors. The AdaxaAppliance provides access via a normal desktop application, AJAX browser interface and Mobile Phone interface. The Adaxa provided version is modified for Australian usage (eg file transfers to Australian Banks, GST set up and reporting, EDIFACT integration with business such as Bunnings)

<http://en.wikipedia.org/wiki/Adempiere>

Point of Sale:

Openbravo POS is a world leading open source POS application. Openbravo POS's integration with Adempiere ERP&CRM provides smooth and timely flow of information from multiple POS's/sites to the back office. The POS is designed specifically for touch screens. It is a feature-rich solution with many robust capabilities, suitable for a wide a range of retail-based businesses and very flexible and highly customizable.

Reporting and Presentation System:

Ireport:

iReport is the free, open source report designer for JasperReports. Create very sophisticated layouts containing charts, images, subreports, crosstabs and much more. Access your data through JDBC, TableModels, JavaBeans, XML, Hibernate, CSV, and custom sources. Then publish your reports as PDF, RTF, XML, XLS, CSV, HTML, XHTML, text, DOCX, or OpenOffice. <http://jasperforge.org/projects/ireport>

Jasper Report:

JasperReports is the world's most popular open source reporting engine. It is entirely written in Java and it is able to use data coming from any kind of data source and produce pixel-perfect documents that can be viewed, printed or exported in a variety of document formats including HTML, PDF, Excel, OpenOffice and Word.

Provides the ability to define and design reports and documents in a manner similar to Crystal Reports. These reports can be called directly from within the ERP and CRM system. <http://jasperforge.org/projects/jasperreports>

Company Intranet:

Turn Your Intranet into an Enterprise Collaboration Platform. By allowing users to find and connect with other employees, discuss projects in team workspaces, and easily view updates to resources and connections in activity streams, an intranet can become very useful. eXo Platform 3.5 enables the next generation of Social Intranets: modular services for document and web content management, enterprise social networks, forums, email, chat, calendar and more, all offered within the trusted security of an enterprise portal.

System Administration:

Webmin is a web-based interface for system administration for Linux. Using any modern web browser, you can setup user accounts, Apache, DNS, file sharing and much more. Webmin removes the need to manually edit configuration files and lets you manage a system using a graphical user interface displayed in a browser window.

<http://www.webmin.com/>

Also included:

All source code for ERP and Intranet system preinstalled in a Mercurial software repository and the Eclipse Integrated Development Environment preconfigured to communicate with the Mercurial repository.
